

Frequently Asked Questions from Distributed System(Unit 1&2)

Distributed system introduction and its characteristics

System Models of any distributed systems. their types , examples

Distributed objects , RPC ,RMI working architecture

Berkeley Clock Synchronization Algorithm and Lamport's logical clock

Differentiate between various types of distributed systems with one example each?

Explain the concept of Vector Clocks in distributed systems. How do they overcome the limitations of Lamport Timestamps?

Networking and internetworking in distributed systems.

What is message passing? How is it different from shared memory communication?

Java RMI as a case study in distributed objects.

What is the role of time in distributed systems?

Define logical clocks. How are they useful in distributed systems?

Differentiate between synchronizing physical clocks and synchronizing logical clocks.

Explain the concept of global states in distributed systems.

What is distributed debugging? Why is it more complex than centralized debugging?

What is distributed mutual exclusion.

Define multicast communication. Mention its advantages.

Consensus problem in distributed systems? Give one example.

Importance of coordination and agreement in distributed systems.
